What is EBSCOhost Mobile?

EBSCOhost Mobile provides seamless access to the EBSCOhost (ehost) or EBSCO Discovery Service (EDS) interfaces via mobile devices. Using mobile detection technology, services using the EBSCOhost platform, including EDS, recognizes whether or not users are connecting from a mobile device, and sends them to the appropriate version of the interface.

Users accessing from a Smartphone or other mobile web-enabled devices are presented with an easily searchable mobile interface incorporating key functionality.

Please note that iPad and some tablet users continue to be directed to the desktop version, as this version of the interface is fully functional on these devices. Toggle links to switch from Mobile to the desktop site may also be available.

Available Functionality/Features:
