Linked Library Service transforms your library data to then publish it to a powerful network and expose it to search engines. Check out our frequently asked questions to learn more.

Transform your existing library data into the linked data format to make your collections visible (and discoverable) on the web. Reach both users and non-users alike as they search their favorite search engine.

With NoveList Select for Linked Data you can add NoveList's read-alike recommendations, appeal factors, and other book information to your Linked Library Service.
