Getting Started with EDS - Phase 2 - Configure and Customize

With your full data received and evaluated, we now design, implement, and test your solution. Your specific configuration will vary based on the services you’ve selected. Configuration and customization happen in parallel, so while we are setting up your EBSCO Discovery Service solution, we are creating your customized profile – including items such as Branding, Profile Settings, and Search Boxes.

**Key Tasks**

- Create an EDS Search Box for your library home page using the EBSCO Search Box Builder. You can also contact Technical Support for assistance.
- Supplement your EDS content by embedding Widgets on search results or detailed record screens. (To request an EDS Wiki account, click here.)
- Set up access options for your patrons, such as Guest Access and Proxy Authentication.

**Recommended Trainings**

- Sign up for an online class or listen to a recorded training session on the following recommended training topics:
  - EDS: EBSCOadmin
  - EDS: New Features

**Further Reading**

- Consider your product customization options (see links below) and discuss with your Project Coordinator:
