Can I create search and journal alerts in EBSCO Discovery Service?

Yes, when using *EBSCO Discovery Service* (EDS), search and journal alerts can be created for EBSCO*host* content. However, the alert is set for the EDS profile, not for a specific EBSCO*host* database. Therefore the alert will filter through all content available in EDS, not just resources contained in a particular EBSCO*host* database.

When using EBSCO*host* Integrated Search (EHIS) in conjunction with EDS, Alerts are not available for external (non-EBSCO) sources.
