What are Enhanced Catalog Records?

In EBSCOadmin, the administrator can enable a feature to “Enhance Catalog Records” in EBSCO Discovery Service (EDS) or EBSCOhost. Within this feature EBSCO provides users with functionality based on a cataloging model described by the International Federation of Library Associations and Institutions (IFLA). The model, known as FRBR (Functional Requirements for Bibliographic Records), is an entity-relationship model that defines how the bibliographic universe should behave. For more information about the FRBR model, [click here](https://help.ebsco.com/interfaces/EBSCO_Discovery_Service/EDS_Admin_Guide/What_are_Enhanced_Catalog_Records).

If enabled by the library administrator, Enhanced Catalog Records will display on the detailed record page and can include one or more of the following pieces of information:

- Other formats and editions *
- Additional book enrichment data from the Library of Congress, such as a Table of Contents or Author Information
- Reviews of the title being viewed
- Similar Books
- Other books by the same author
- Summaries from Literary Reference Center (included if you are subscribed to Literary Reference Center and the database is included in your EDS profile or EBSCOhost search)
- Google Book Preview
- Goodreads User Reviews
- Title Search on Wikipedia
- QR Code

*Note: This is the only piece of related information that provides a FRBR experience for EBSCO users. EBSCO uses a book matching service to correspond ISBNs, Library of Congress Call Numbers, and/or OCLC Control Numbers with the records in a customer's catalog. Search strings created by EBSCO along with system-generated apps (formerly known as widgets) display the remaining pieces of related information.

The Enhance Catalog Records feature is set to "On" by default. To disable the feature:

1. Log in to EBSCOadmin.
2. Under the Customize Services tab, click the Viewing Results tab.
3. Scroll down to "Enhance Catalog Records" and select the "Off" radio button.
4. Click **Submit**.

**Note:** There is no option to select which Enhanced Catalog Record apps (widgets) appear on the detailed record. You may select to display all ("On") or none ("Off").
