How can I create an HTML only EBSCO Discovery Service search box for my institution's web site?

You can use custom code to create an HTML only search box for your EBSCO Discovery Service (EDS) profile.

Copy the custom code below and modify it to meet your specific needs.

```html
<p>Search the EBSCO Discovery Service:</p>
<form action="http://search.ebscohost.com/login.aspx" method="get" target="_blank">
  <input name="direct" value="true" type="hidden">
  <input name="scope" value="site" type="hidden">
  <input name="site" value="eds-live" type="hidden">

<!-- Authentication type -->
  <input name="authtype" value="cookie,ip,uid" type="hidden">

<!-- Limiter: Full Text -->
  <input name="cli0" value="FT" type="hidden">
  <input name="clv0" value="Y" type="hidden">

<!-- Limiter: Scholarly/Peer-Reviewed -->
  <input name="cli1" value="RV" type="hidden">
  <input name="clv1" value="N" type="hidden">

<!-- Search box and Submit button -->
  <input name="bquery" value="" type="text" size="40">
  <input value="Search" type="submit"/>
</form>
```
