What is the Full Text limiter in EBSCO Discovery Service?

The **Full Text** limiter in *EBSCO Discovery Service* (EDS) is configurable and allows administrators to enable searchers to limit results to records which have full text available either online or, if designated, physically available from the library.

**Full-text content sources can include:**

- All subscribed full-text EBSCOhost databases (this includes results retrieved via SmartLinking)
- EDS Partner databases that have a full-text CustomLink set up in EBSCO*admin*.
- EDS custom catalog records that have been identified as full text.
- Institutional repository records that have been identified as Full Text.
- Other subscribed content made available via a Local Collection that has a full-text CustomLink set up in EBSCO*admin*. (e.g. Lexis-Nexis, NewsBank)
- Content managed via Full Text Finder that has a full-text CustomLink set up in EBSCO*admin* (e.g. can be e-journal collections loaded from other knowledge bases such as SFX, Serials Solutions).
