DynaMed

This page enables you to browse all of the available support documentation related to DynaMed.

*DynaMed* is a clinical reference tool created by physicians for physicians and other healthcare professionals for use primarily at the 'point-of-care,' with clinically-organized summaries for more than 3,200 topics. Based on the results of a study published in Annals of Family Medicine (November/December 2005), not only did primary care clinicians answer more clinical questions with access to *DynaMed* than without *DynaMed*, but these clinicians also found more answers in *DynaMed* that changed clinical decisions.
