How do I set up access to EBSCOhost from my Z39.50 client?

Several EBSCOhost customers use Z39.50 compliant interfaces and connect to EBSCOhost databases. Please follow this link to a list of all Z39.50-related FAQs. Here you will find:

- The IP address to our Z39.50 port
- A list of database short names you need access to
- Your account name, (EBSCO uses a three part identification field separated by periods)
- Your password
- MARC21 Record Format and Attribute Sets

Examples of commonly used Z39.50 clients include:

- Metalib
- WebZ
- Endeavor Encompass
- Endnote
- Procite
- Reference Manager
- RefWorks
