In EBSCOadmin, what options are available to control when a CustomLink will display?

There are numerous filtering options to make sure that your CustomLinks only display when clicking on them delivers the desired result:

- **Mandatory Fields** - Indicates fields that must have a value in order for the link to show. For a list of fields, see [What fields can CustomLinks search?](https://help.ebsco.com/interfaces/EBSCOadmin/EBSCOadmin_FAQs/what_fields_can_CustomLinks_search).  
- **Hide Link if Full Text** - If your link is designed to send a user to full text and the full text of the article is already in EBSCOhost, you can hide the link.  
- **Show Link if Item in Collection** - If you have a list of titles for which you only want the link to display, you can create a collection in EBSCOadmin and use this filter.  
- **Show Link if Item Not in Collection** - If you have an Interlibrary Loan (ILL) form, you may want to create a list of titles you subscribe to, and use this filter so that your CustomLink to your ILL form only shows when it's not in that list.  
- **Show on Result List** - This will display your link below each citation on the Result List that meets those criteria you set for displaying the link.  
- **Show on Detailed Display** - If a user clicks on the title of an article, they will see the CustomLink display next to the View Links heading.  
- **Show on Publication Search** - If this is set, your CustomLink will display when the user searches using the Publication search feature. It will display after a user clicks on a specific publication.
