What fields and parameters can my link resolver use?

The following is a list of fields or parameters that can be used in a link to a library catalog, OpenURL resolver, (such as Full Text Finder), Interlibrary Loan form, or Document Delivery Service. A URL mask is used to capture specific fields of an article's citation. Within a URL mask, each field name is surrounded by { }.

{ISSN} - ISSN without a dash
{ISSN1} - ISSN with a dash
{ISBN} - ISBN
