How do I add Apps?

**EBSCOadmin** allows administrators to add custom functionality to **EBSCOhost**, **Publication Finder**, and **EBSCO Discovery Service** by adding custom apps (formerly known as widgets). Apps may be added as either iFrame URLs (a Wikipedia search of a user's EBSCOhost search terms, for example,) or Custom HTML code, such as a LibGuides app on the Result List or Detailed Record screens.

To add Custom Apps to your Result List or Detailed Record:

1. Select the profile and click the **Viewing Results** Sub-Tab.
2. Click the **Modify** link to the right of **Widgets**.
   The Custom Widgets screen appears.
3. Select where you would like your app to appear from the **Custom Widgets for** drop-down list: **Result List** or **Detailed Record**.

   ![Custom Widgets for:](image)

4. Click the **Add Item** link.
   The Add Item screen appears.

5. Select either the **iFrame URL** or **Custom HTML** type radio button.
6. Enter a name in the **Label** field.
7. Enter the height of your app in the **Height** field.
   **Note:** There is a maximum height of 500 pixels. Width is fixed at 190 pixels.
8. Enter a URL to your app in the **iFrame URL** field.
   **-OR-**
9. Enter HTML code for your app into the **CustomHTML** field.
10. Click **Submit**.

   The app is added to your list of created additional resources.

11. Select the **Yes** radio button to default the app to be opened on the result list.

12. Check the box in the **Show** column to enable the app.

13. Click **Submit**
