Z39.50 Connection Information

Connection Information

- Host Name: zgw.ebscohost.com
- Port Number: 210
- Target Information: custid.groupid.profileid

Note: This data is customer specific.

- Where custid = Customer ID from EBSCO admin, for target account
- Where groupid = Group ID from EBSCO admin, for target group
- Where profileid = Profile ID from EBSCO admin, for target profile

Password

The password is located in EBSCO admin under profile maintenance for the Z3950 profile only. If you do not have a Z3950 profile please contact technical support (support@ebsco.com) to have this added. For best performance always use the z3950 profile provided for use with Z39.50 clients in EBSCO admin in your Target Information.

Note: Use of a password is not always required for connection via a Z39.50 client, but is necessary if the target profile contains a password.

Suffixing the Target String for the Delivery of Full Text

As many EBSCO host databases contain full text, you may want to suffix your target string so that this Full Text may be delivered in a format other than Marc 21, for example in SUTRS record format. The SUTRS record format supports delivery in plain text or HTML. To activate this formatted full text, simply suffix the end of your authentication string with the following: @SUTRS-HTML.

Additionally, to retrieve Full Text already formatted in HTML (via a hyperlink), you should suffix your target string with the following: @FT-LINKS. Keep in mind that no MARC Full Text is ever displayed when this feature is enabled.

Database Shortnames
