What is the difference between the Image Collection and the Image Quick View Collection?

The Image Collection is a static database of licensed and public domain images and is available to customers accessing EBSCOhost proprietary databases including, but not limited to, Academic Search Premier, Academic Search Elite, MasterFILE Premier, and Searchasaurus.

The Image Quick View Collection is not a static database but is built based on the entire collection of databases in the EBSCOhost user group the customer is accessing. Content available in the Image Quick View Collection is subject to the databases a customer is subscribed to.
