How do I create a Flipster mobile app profile in EBSCOadmin?

The Flipster app enables your users to find and read your institution’s Flipster digital magazines on their mobile devices.

In order for your users to be able to use the Flipster Mobile App, you must create a dedicated Flipster app profile for your account in EBSCOadmin.

Please note: Creating a profile for the Flipster Mobile App will cause it to appear on your Select Service page with your other EBSCO interfaces. Naming it clearly as “Flipster Mobile App” will help your patrons to understand that this is not really a service that should be selected within their web browser.

To create a profile for the Flipster mobile app:

2. From the Customize Services tab, select the group from the Current Group drop-down list with which the new profile will be associated. This group must utilize the authentication method you wish your users to use to log in to the app.

3. Click the Profile Maintenance link.

4. Click the Add a New Profile link.

5. Enter the following information in the fields provided:
   
   - Enter “flipma” for the Profile ID and add a Description.
   - From the Interface drop-down menu, select EDS - API.
6. Click **Submit**. You are returned to the Profile Maintenance screen.

7. Locate the *Flipster* Mobile App profile you just created and click its hyperlinked **Profile ID**.

8. In the **Profile URL** field, add the following:

   https://m-eon-reader.ebscohost.com/NativeApp/EncodeEdsApiToken

9. Click **Submit**.

10. Click the **Back to Customize Services** link.

### Add your *Flipster* database to the profile

Next, you must add your *Flipster* database to the profile.

1. From the **Choose Profile** drop-down list, select the new *Flipster* Mobile App profile.

2. Click the **Databases** sub-tab. The Databases Screen displays.

3. **Enable** Column – Select the **On** radio button for the *Flipster* database (eon) to enable it on the profile.
4. Click **Submit**. Your changes have been saved.

After you’ve created your *Flipster* app mobile profile, you must set up your preferred order of authentication and then enable the *Flipster* app for your account.
