The Interface Usage Analytics Report offers a quick glance at your user's interface use. The Interface Usage Analytics Report is pre-configured and is meant to enhance your ability to understand your users' interface usage.

**To access the Interface Usage Analytics report:**

2. Click **Reports & Statistics** in the tool bar at the top of the screen.
3. Click **Standard Usage Analytics** under EBSCOhost/EDS.
4. Select **Interface Usage Report**.

**Viewing the Monthly Trend Graph:**

- The Monthly Usage Trend graph plots the last 13 months of usage across all interfaces for each metric, represented by color.
- You may hover over a month to see the total usage for that month.
- If you are not hovering over any particular month, the color coded summary box to the right displays total counts for the last 13 months.
- When hovering your pointer in the graph over a specific month, the summary box displays the counts for the month.
- For the last 'in progress' month on the graph, you may hover over that month to see the specific date the usage is available through.
• Click a color coded metric in the summary box to hide it from the graph. Metrics can be re-displayed in the graph by clicking the metric again.

• Click the down arrow icon near the summary box to Download, Annotate, or Print the analytics graph.

• When you select to Annotate, you have the ability to add shapes or text to the graph, as well as customize the size and color of your added shapes.

**Viewing the Report Grid:**

• The grid below the Monthly Trend Graph displays counts for the previous 13 months, broken down by all interfaces that have had at least 1 use in the last 13 months for any of the pre-selected metrics.

• Use the **Show/Hide Columns** drop-down menu to remove columns if you wish.

• Use the search box to search for specific interfaces to display only those statistics in the grid.
